

# A shared vision

**eMobility stands for 2015+ in Mobile and Wireless Communications**

eMobility – The Mobile and Communication Technology Platform is the place for industry and academia to share visions and adopt a common Strategic Research Agenda for research and future development.

The constantly growing number of members - now over 260, including over 100 academic institutions and over 60 SME's, shows that the Technology Platform was established at the right time for Europe to achieve the goals set up at the Lisbon strategy.

## **Europe's industry is fully committed:**

- Over 10 % of the annual turn-over of the European mobile and wireless communications industry is committed to R&D,
- For collaborative R&D, 250 million Euro per annum, matched by EU funding, would be an appropriate level of support for the sector in Framework Programme 7.

## **The value to Europe of the eMobility Technology Platform is that it provides:**

- Support for the renewed Lisbon Strategy and the i2010 Initiative,
- Empowerment of citizens with new mobile based applications,
- Creation of new wealth in the European economy,
- Reinforcement of European leadership in mobile and wireless communications, and
- Provision of input for the future European 7th Framework Programme.

**For more information please visit our web site [www.emobility.eu.org](http://www.emobility.eu.org)**
